

INTERVIEW GUIDE

Project Title:

Evidence of the adoption of Green Software Engineering practices: an investigation of the state of the art and practice in the software industry

Researcher: Thalita dos Santos Reis

Advisor: Prof. Dr. André Magno Costa de Araújo

Institution: Federal University of Alagoas – PPGI/IC/UFAL

Participant Profile Construction

We will begin with a few questions to better understand your professional profile.
Please respond objectively:

1. Age Range:

- ☐ () 18 to 24
- ☐ () 25 to 34
- ☐ () 35 to 44
- ☐ () 45 to 54
- ☐ () 55 to 64
- ☐ () Over 64

2. City and State where you work:

3. Field of education:

4. **In which professional environment do you work?** (e.g., Web Dev, Mobile, QA, DevOps, etc.)

5. Length of experience in the software development field:

6. Do you have any disability, impairment, or disorder?

- ☐ () Yes ☐ () No

6.1. If yes, which one(s)?

7. Does this condition interfere with the use of tools or development environments?

○ () Yes () No

8. On a scale from 1 to 10, what is your level of familiarity with technologies for sustainable development?

8.1. For what purposes do you use them?

9. Have you participated in projects focused on sustainability (e.g., energy efficiency, green refactoring)?

() Yes () No

9.1. If yes, describe the process and your level of involvement

10. Are the functionalities of the systems you currently develop aligned with your organization's sustainability goals?

Interview with Open-Ended Questions

Now, let's move on to the main interview questions. Feel free to share your experience and perceptions:

1. **What are the main challenges you believe may be encountered when adopting sustainable practices in software development?**
2. **Do you believe that adopting sustainable practices can ensure that environmental concerns are considered during software development? Why?**
3. **How can sustainable practices evolve to become even more effective and viable in the context of your organization or project?**
4. **Is the application of sustainable practices useful for understanding and aligning the development team's workflows with goals of energy efficiency and reduced environmental impact? Why?**
5. **Do you believe that proper training in Green Software Engineering is essential to increase the adoption of these practices in software development? Why?**
